What is ASOR?

ASOR at a High Level

- **Lifecycle Management**
- **Security & Governance**
- **Analytics & Observability**
- **Interoperability**

Lifecycle Management

- View of all agents in enterprise
- Registration to Deactivation
- Skill management in Workday
 - Enable, disable, secure

Security & Governance

- Agent Security Framework
- Agent System User
- Handles multiple execution modes

Analytics & Observability

- Agent Usage
- Audit Actions
- Detailed compliance reporting
 - Agent inputs and outputs

Interoperability

- Agent Gateway
- All the access patterns you know
 - SOAP
 - REST
 - Graph
 - RaaS
 - WQL

Agent Skill Taxonomy

Bro, what even is an agent?

- **No standardized definition**
- **LLM + Tools**
- **Don't overthink it**

Proprietary & Confidential

the
groove

~~Taxidermy~~ Tallahassee Taxonomy

- **Delegate**
 - **“on-behalf-of”**
- **Ambient**
 - **“The robots are taking over”**

Registration Explained

**Chris, please stop talking. Show
us something PLEASE**

Security

Agent System User (ASU)

- **Up to two per Agent**
- **Has an identity in Workday**
- **Audit trail when it does things**
- **DON'T USE AN ISU!**

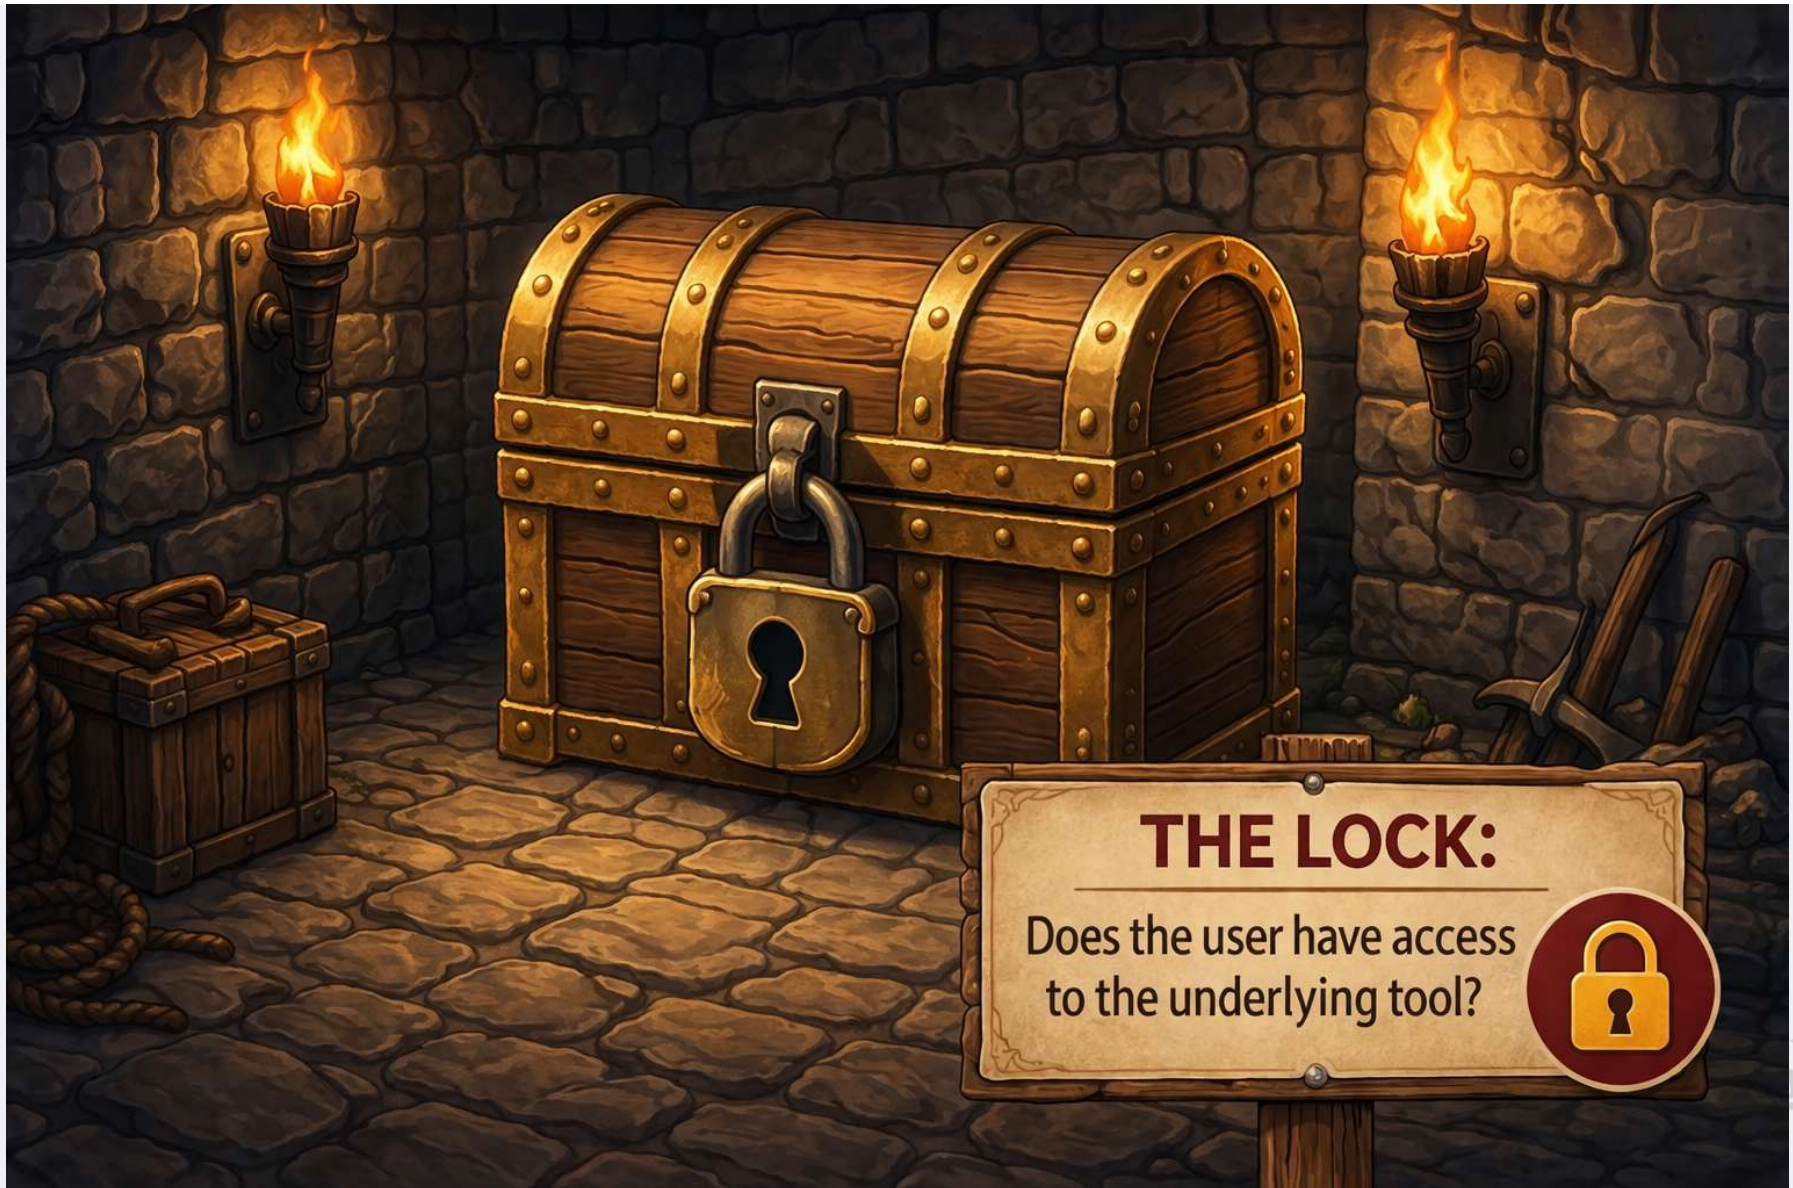

Four (Delegate) Security “Checkpoints”

- **Moat**
- **Wall**
- **Guards**
- **Lock**

2 WALL

Does the user have access to this skill?

1 MOAT

Does the user have access to any skill on this agent?

4 LOCK

Does the user have access to the underlying tool?

Examples:

BP, Web Service Operations, WQL, etc.

3 GUARDS

Is the agent scoped for this skill (e.g., is it enabled?)

DEFENSE IN DEPTH

Four tenant-configured defenses around access to agent skills.

Ambient Security

Create your own x509 cert first

1. Generate an x509 key pair locally
2. Run **Create x509 Public Key** in Workday
3. Paste in the **public key** from your generated key pair
4. Configure the agent
5. Reference the **x509 Public Key** when prompted
6. Copy and securely save the API client details

Ambient Security (continued)

1. Run the task **View Security for Agent Skill**
2. Identify the security necessary for the Ambient Agent
3. Search global nav for: **securitygroup: ambient**
4. Find the **Agent Security Group** for your agent in the list
5. Related Actions -> Security Group -> Maintain Domain Permission for Security Group

A man and a woman are working together in an office. The man is seated at a desk, looking at a computer monitor and smiling. The woman is standing behind him, also smiling and looking at the screen. The background shows a wall with some charts and a window. The overall tone is professional and collaborative.

External Agents

**Can you please give us
another demo? We're bored.**
